# Introduction

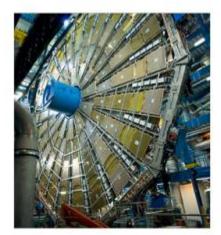

### Jun Zhu

dcszj@mail.tsinghua.edu.cn http://bigml.cs.tsinghua.edu.cn/~jun Sate Key Lab of Intelligent Tech. & Systems, Tsinghua University

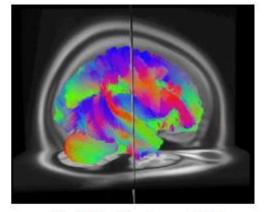

## Goals of this Lecture ...

- Show that machine learning (ML) is cool
- Get you excited about ML
- Give an overview of basic problems & methods in ML
- Help you distinguish hype and science
- Entice you to take further study on ML, write a thesis on ML, dedicate your life to ML ...

# The age of Big Data

CERN Collider 320 x 10<sup>12</sup> bytes/second

Prof. Tim Verstynen, CMU Personal Connectome 10<sup>18</sup> bytes/human

# facebook

1 billion messages/day

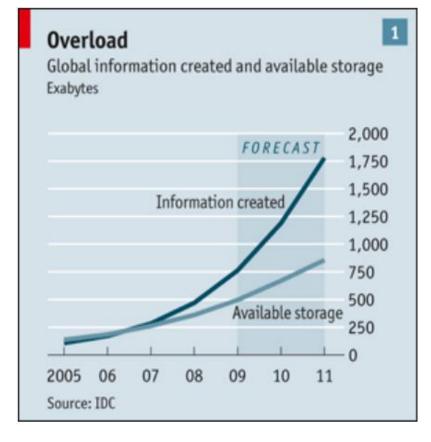

200 million tweets/day

"Every day, people create the equivalent of 2.5 **quintillion** bytes of data from sensors, mobile devices, online transactions, and social networks; so much that 90 percent of the world's data has been generated in the past two years."

The Huffington Post: Arnal Dayaratna: IBM Releases Big Data

# The age of Big Data

40,000 Exabytes by 2020 (IDC)

200 million in government funding (White house initiative)

jobs shortage of 200,000 data experts by 2018 (Bloomberg)

"the sexiest job of the 21st century." (Harvard Business Review)

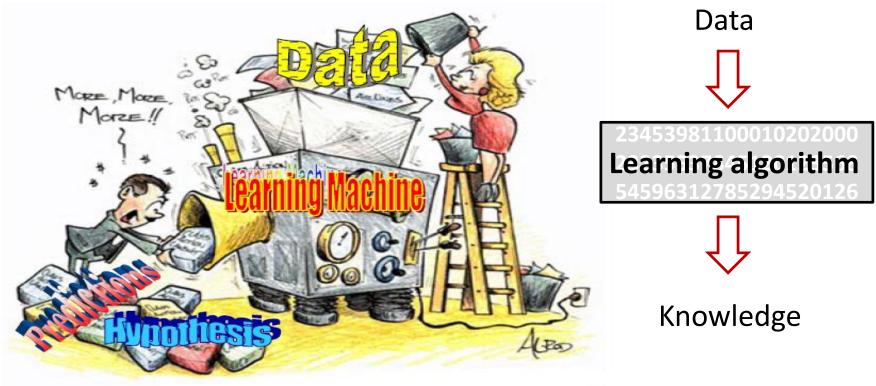

From Data to Knowledge ...

# What is Machine Learning?

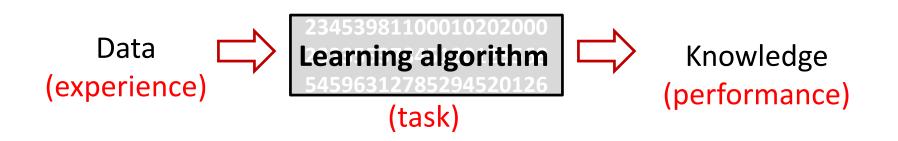

**Machine learning**, a branch of <u>artificial intelligence</u>, is a scientific discipline concerned with the design and development of <u>algorithms</u> that take as input empirical <u>data</u>, and yield patterns or predictions thought to be features of the <u>underlying mechanism</u> that generated the data

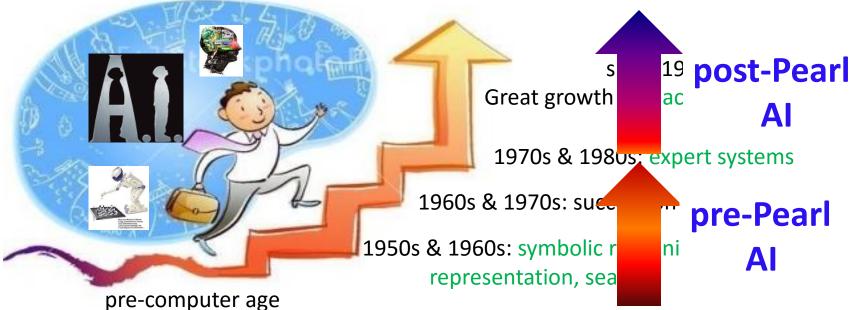

# What is machine learning?

- Study of algorithms that
  - (automatically) improve their performance
  - at some <u>task</u>
  - with experience

# (Statistical) Machine Learning in AI

thoughts on symbolic reasoning

#### [Judea Pearl, Turing Award 2011]

- For "innovations that enabled remarkable advances in the partnership between humans and machines that is the foundation of Artificial Intelligence (AI)"
- "His work serves as the standard method for handling uncertainty in computer systems, with applications from medical diagnosis, homeland security and genetic counseling to natural language understanding and mapping gene expression data."
- "Modern applications of AI, such as robotics, self-driving cars, speech recognition, and machine translation deal with uncertainty. Pearl has been instrumental in supplying the rationale and much valuable technology that allow these applications to flourish." 8

#### Heuristics, Probability and Causality

A Tribute to Judea Pearl

"The field of AI has changed a great deal since the 80s, and arguably no one has played a larger role in that change than Judea Pearl. Judea Pearl's work made probability the prevailing language of modern AI and, perhaps more significantly, it placed the elaboration of crisp and meaningful models, and of effective computational mechanisms, at the center of AI research ..."

This book is a collection of articles in honor of Judea Pearl. Its three main parts correspond to the titles of the three ground-breaking books authored by Judea ...

# Regression

Stock market prediction

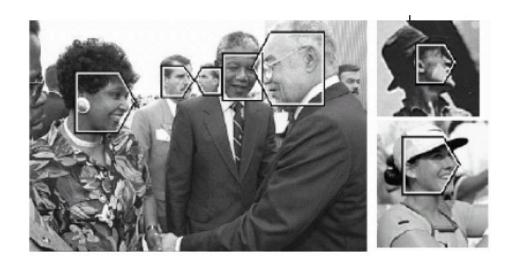

# **Computer Vision**

- Face recognition
- Scene understanding
- Action/behavior recognition
- Image tagging and search
- Optical character recognition (OCR)

ImageNet Challenge: 1000 categories, 1.2 million images for training

# Speech Recognition

- A classic problem in AI, very difficult!
  - "Let's talk about how to wreck a nice beach"
  - small vocabulary is easy
  - challenges: large vocabulary, noise, accent, semantics

# Natural Language Processing

- Machine translation
- Information Extraction
- Information Retrieval, question answering
- Text classification, spam filtering, etc....

# Control

• Cars navigating on their own

DAPA urban challenge

Tsinghua Mobile Robot V (THMR-V):

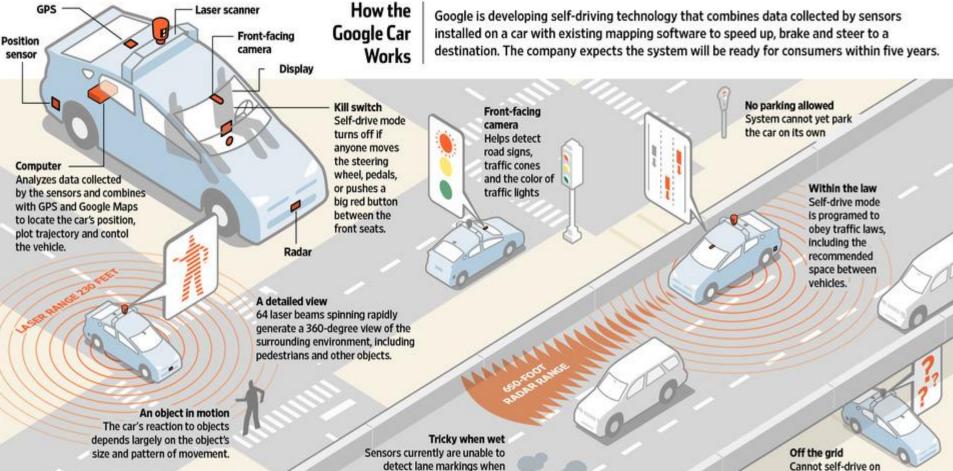

- The first license, Nevada, 2012
- Nevada, Florida, California, Michigan, allows testing on public roads

# Control (cont'd)

### How the Google car works

a road or area not yet mapped.

Christopher Kaeser/The Wall Street Journal

detect lane markings when snow or rain is present.

# Control (cont'd)

• Robot assistant?

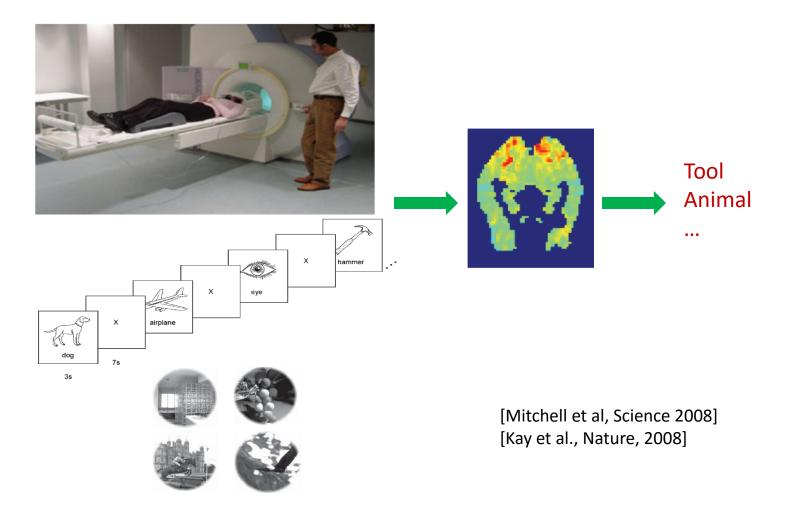

http://stair.stanford.edu/ 20

### Science

• Decoding thoughts from brain activity

# Science (cont'd)

- Bayesian models of inductive learning and reasoning [Tenenbaum et al., Science 2011]
  - Challenge:
    - How can people generalize well from sparse, noisy, and ambiguous data?
  - Hypothesis:
    - If the mind goes beyond the data given, some more abstract background knowledge must generate and delimit the possible hypotheses
  - Bayesian models make structured abstract knowledge and statistical inference cooperate
  - Examples
    - Word learning [Xu & Tenenbaum, Psychol. Rev. 2007]
    - Causal relation learning [Griffiths & Tenenbaum, 2005]
    - Human feature learning [Austerweil & Griffiths, NIPS 2009]
    - ...

# More others ...

- Many more
  - Natural language processing
  - Speech recognition
  - Computer vision
  - Robotics
  - Computational biology
  - Social network analysis
  - Sensor networks
  - Health care
  - Protest ??
  - ...

# Machine learning in Action

• Machine learning for protest?

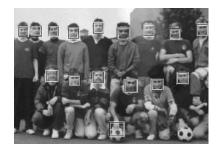

CMU ML students and post-docs at G-20 Pittsburgh Summit 2009

# Machine Learning – practice

decoding brain signal

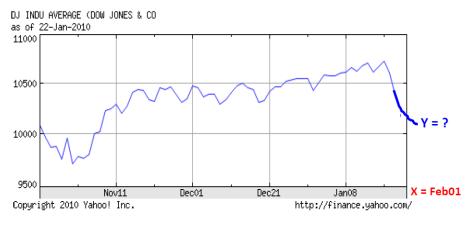

face recognition

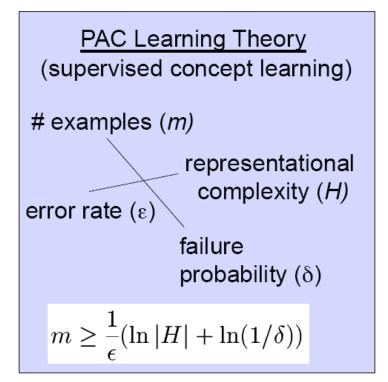

document classification

robot control

#### stock market prediction

# Machine Learning – theory

Other theories for

- semi-supervised learning
- reinforcement skill learning
- active learning

• ..

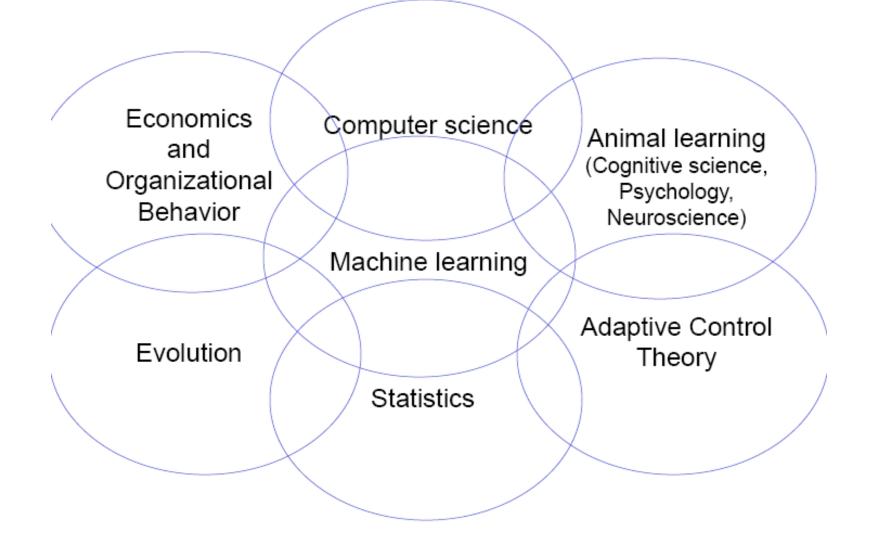

- ... also relating to
- # mistakes during training
- asymptotic performance
- convergence rate
- bias, variance tradeoff

• .

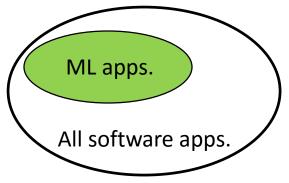

### [Leslie G. Valiant, 1984; Turing Award, 2010]

"For transformative contributions to the theory of computation, including the theory of probably approximately correct (PAC) learning, the complexity of enumeration and of algebraic computation, and the theory of parallel and distributed computing."

# Growth of Machine Learning in CS

- Machine learning already the preferred approach to
  - Speech recognition, natural language process
  - Computer vision
  - Medical outcomes analysis
  - Robot control

- •••
- This ML niche is growing (why?)

# Growth of Machine Learning in CS

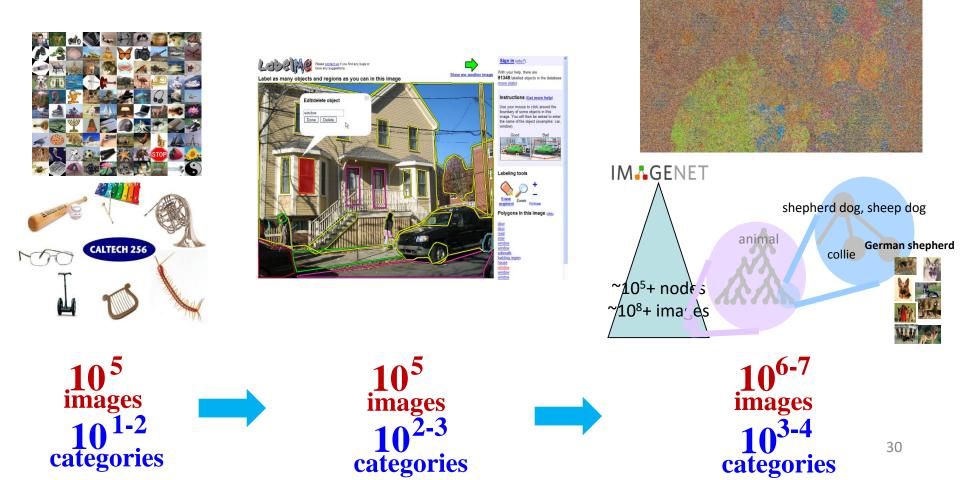

- Machine learning already the preferred approach to
  - Speech recognition, nature
  - Computer vision
  - Medical outcomes analy
  - Robot control

### Huge amount of data ...

- Web: estimated Google index 45 billion pages
- Transaction data: 5-50 TB/day
- Satellite image feeds: ~1TB/day/satellite
- Biological data: 1-10TB/day/sequencer
- TV: 2TB/day/channel;
- YouTube 4TB/day uploaded
- This ML niche is growing Photos: 1.5 billion photos/week uploaded
  - Improved machine learning algorithms
  - Increased data capture, networking, new sensors
  - Software too complex to write by hand
  - Demand for self-customization to user, environment

## ML has a long way to go ...

• Very large-scale learning in rich media

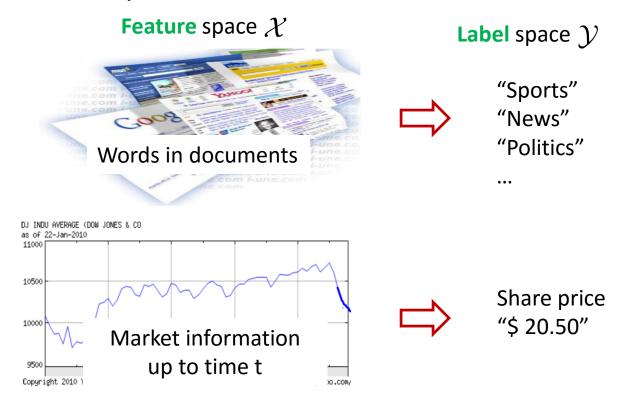

# Machine Learning Tasks

- Broad categories
  - Supervised learning
    - Classification, Regression
  - Unsupervised learning
    - Density estimation, Clustering, Dimensionality reduction
  - Semi-supervised learning
  - Active learning
  - Reinforcement learning
  - Transfer learning
  - Many more ...

# Supervised Learning

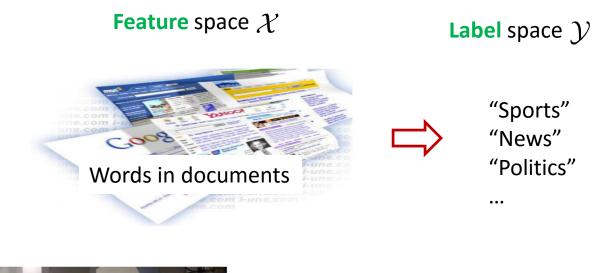

• Task: learn a predictive function  $h: \mathcal{X} \to \mathcal{Y}$ 

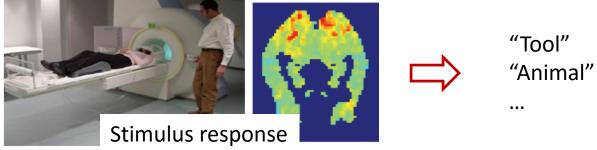

• "Experience" or training data:

 $\{\langle x_d, y_d \rangle\}_{d=1}^D, x_d \in \mathcal{X}, y_d \in \mathcal{Y}$ 

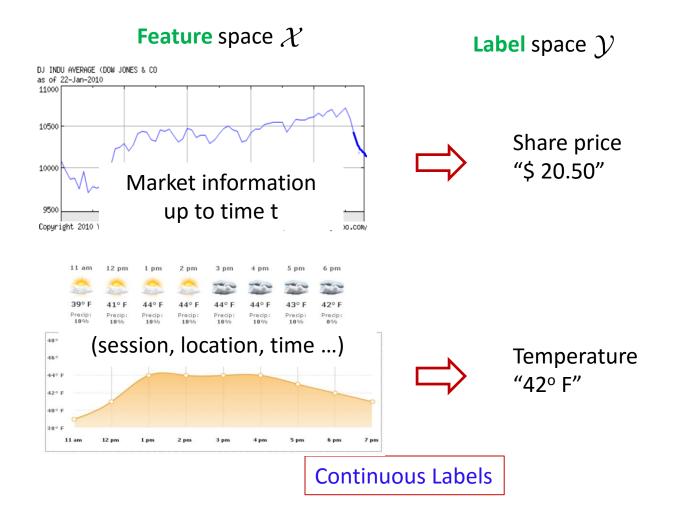

# Supervised Learning – classification

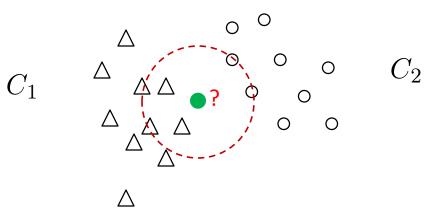

Discrete Labels

# Supervised Learning – regression

# How to learn a classifier?

K-NN: a Non-parametric approach

Distance metric matters!

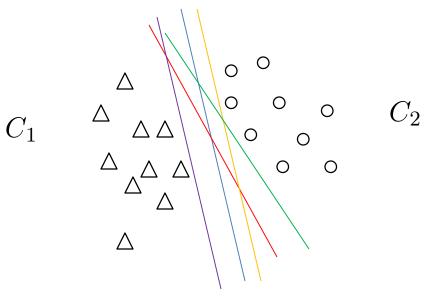

# How to learn a classifier?

Parametric (model-based) approaches:

a good decision boundary

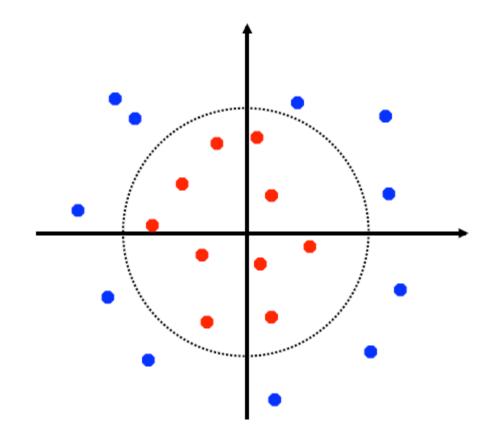

$$y^* = \begin{cases} C_1 & if \ g(x) > 0 \\ C_2 & if \ g(x) < 0 \end{cases}$$

# How to learn a classifier?

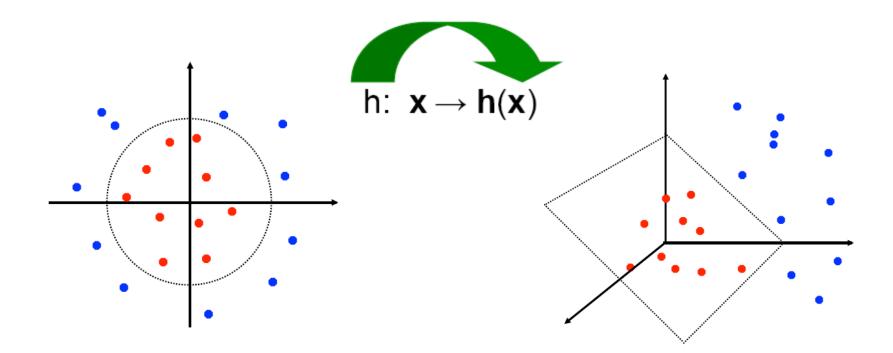

Many good decision boundaries

which one should we choose?

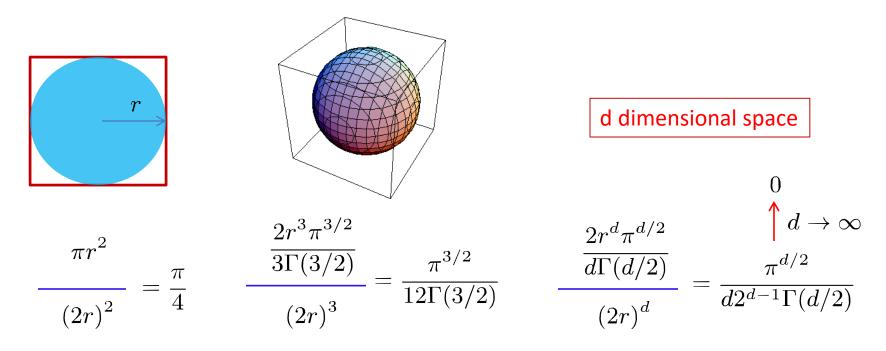

*How about non-linearity?* 

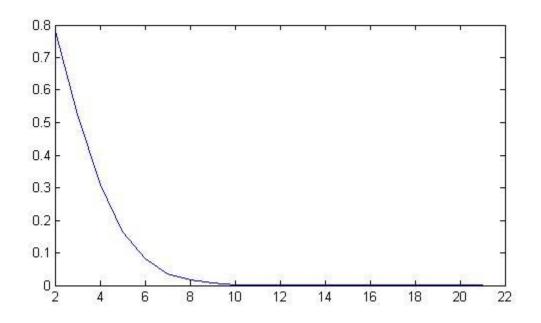

### *How about non-linearity?*

The higher dimension, the better?

- Curse of dimensionality
  - A high dimensional space is always almost empty

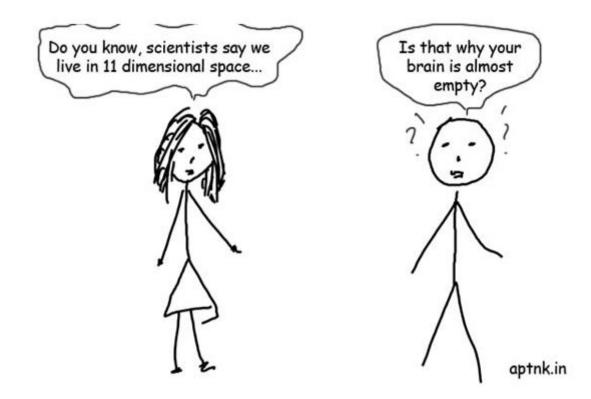

- Curse of dimensionality
  - A high dimensional space is always almost empty

when one wants to learn pattern from data in high dimensions no matter how much data you have it always seems less! 41

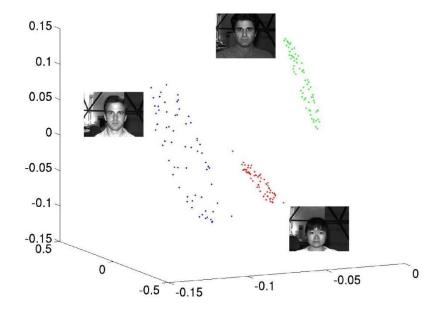

• Curse of dimensionality

when one wants to learn pattern from data in high dimensions no matter how much data you have it always seems less! A high dimensional space is always almost empty

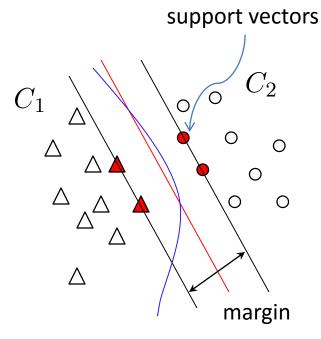

- Curse of dimensionality
  - A high dimensional space is always almost empty
  - ... in high dimensions no matter how much data you have it always seems less!
- The blessing of dimensionality
  - ... real data highly concentrate on low-dimensional, sparse, or degenerate structures in the high-dimensional space.
- But no free lunch: *Gross errors and irrelevant measurements* are now ubiquitous in massive cheap data.

- The blessing of dimensionality
  - ... real data highly concentrate on low-dimensional, sparse, or degenerate structures in the high-dimensional space.

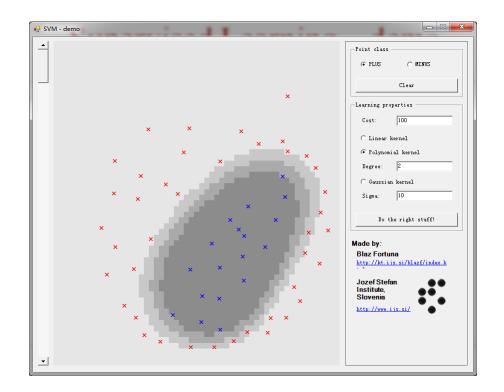

Images of the same face under varying illumination lie approximately on a low (nine)-dimensional subspace, known as the harmonic plane [Basri & Jacobs, PAMI, 2003].

- Support vector machines (SVM) basics
  - SVM is among the most popular/successful classifiers
  - It provides a *principled way* to learn a *robust* classifier (i.e., a *decision boundary*)
- SVM
  - chooses the one with maximum margin principle
  - has sound theoretical guarantee
  - extends to *nonlinear decision boundary* by using *kernel* trick
  - learning problem efficiently solved using convex optimization techniques

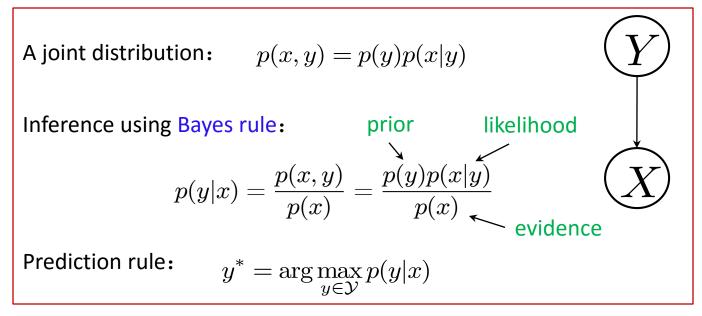

• Support vector machines (SVM) – demo

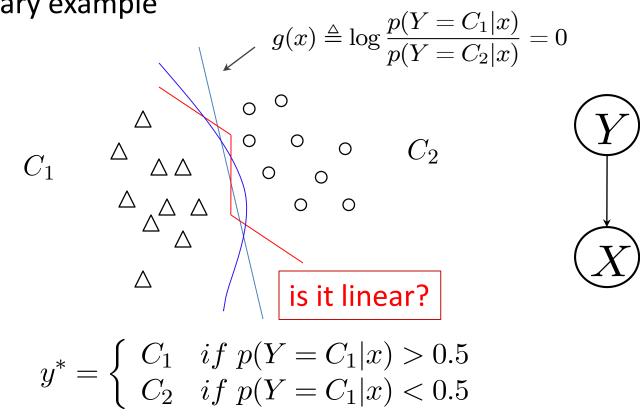

Good ToolKits: [1] SVM-Light: <u>http://svmlight.joachims.org/</u> [2] LibSVM: <u>http://www.csie.ntu.edu.tw/~cjlin/libsvm/</u>

- Naïve Bayes classifier basics
  - an representative method from the very important family of probabilistic graphical models and Bayesian methods

- fundamental building blocks for *Bayesian networks*
- nice illustrative example of Bayesian methods

- Naïve Bayes classifier basics
  - binary example

It is for generalized linear models (GLMs)

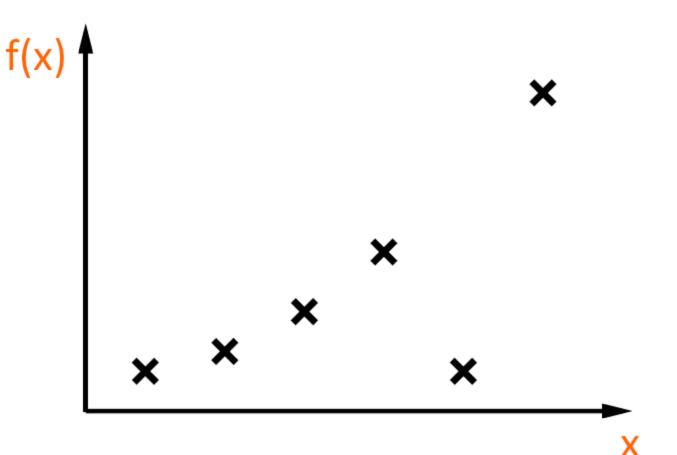

- Many other classifiers
  - K-nearest neighbors
  - Decision trees
  - Logistic regression
  - Boosting
  - Random forests
  - Mixture of experts
  - Maximum entropy discrimination (a nice combination of max-margin learning and Bayesian methods)

— ...

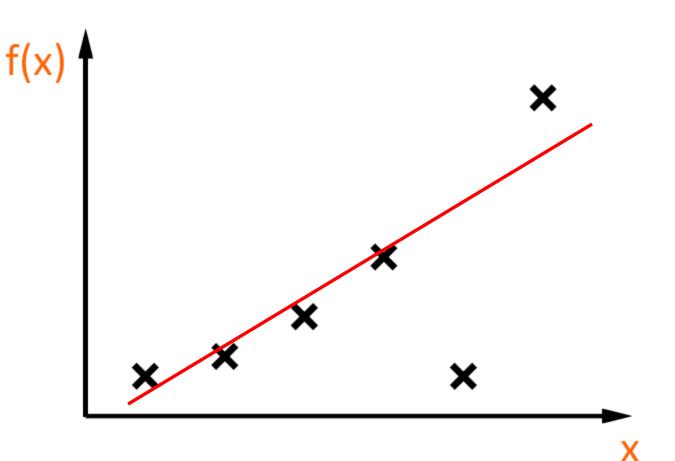

### Advice #1:

All models are wrong, but some are useful. – G.E.P. Box

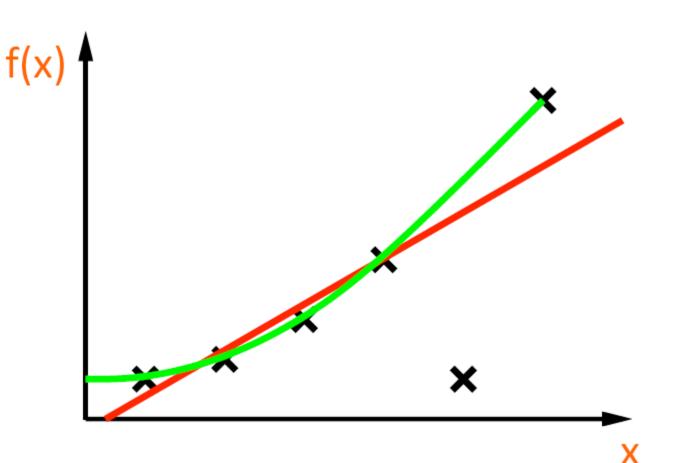

• A simple curve fitting task

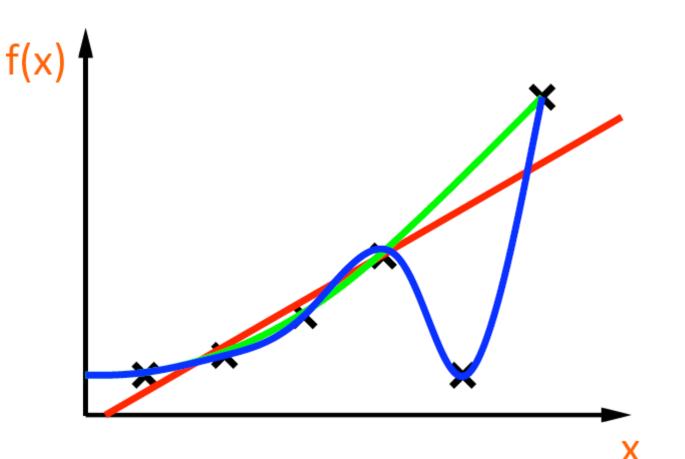

• Order = 1

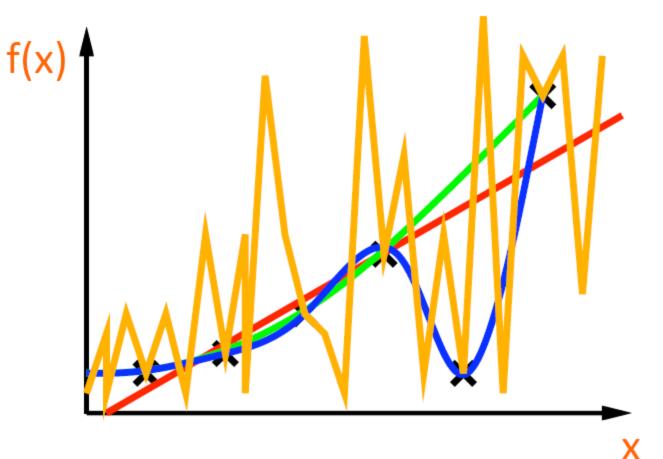

• Order = 2

• Order = 3

• Order = 9?

Advice #2: use ML & sophisticated models when necessary

Issues with model selection!!

### Unsupervised Learning

- Task: learn an explanatory function  $f(x), x \in \mathcal{X}$
- Aka "Learning without a teacher"

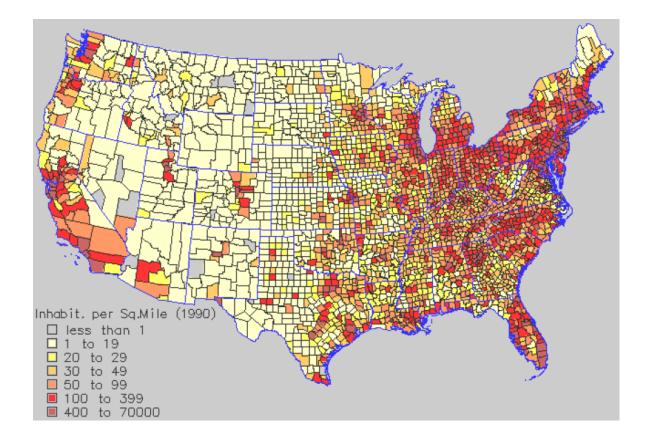

Feature space  $\mathcal{X}$ 

Word distribution (probability of a word)

• No training/test split

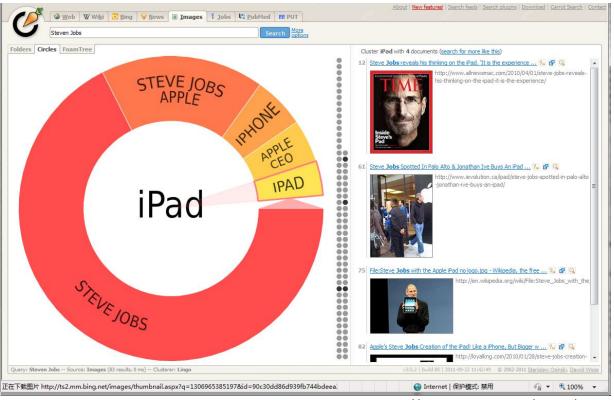

### Unsupervised Learning – density estimation

Feature space  $\mathcal{X}$  geographical information of a location

Density function  $f(x), \ x \in \mathcal{X}$ 

### Unsupervised Learning – clustering

http://search.carrot2.org/stable/search

Feature space  $\mathcal{X}$ Attributes (e.g., pixels & text) of images

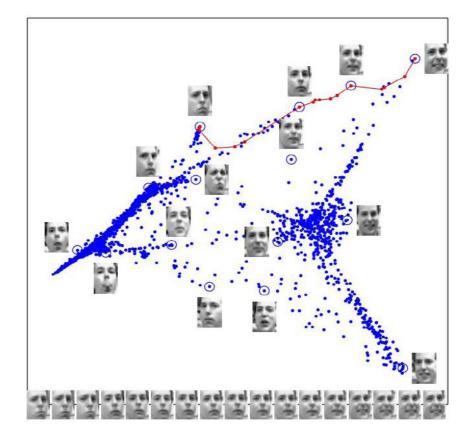

### Cluster assignment function

 $f(x), x \in \mathcal{X}$ 

# Unsupervised Learning – dimensionality reduction

Images have thousands or millions of pixels

Can we give each image a coordinate, such that similar images are near each other ?

Feature space  $\mathcal{X}$  pixels of images

Coordinate function in 2D space  $f(x), \; x \in \mathcal{X}$ 

### Summary: what is machine learning

• Machine Learning seeks to develop theories and computer systems for

### dealing with

• complex, real world data, based on the system's own experience with data, and (hopefully) under a unified model or mathematical framework, that

have nice properties.

### Summary: what is machine learning

- Machine Learning seeks to develop theories and computer systems for
  - representing;
  - classifying, clustering, recognizing, organizing;
  - reasoning under uncertainty;
  - predicting;
  - and reacting to
  - ..
- complex, real world data, based on the system's own experience with data, and (hopefully) under a unified model or mathematical framework, that

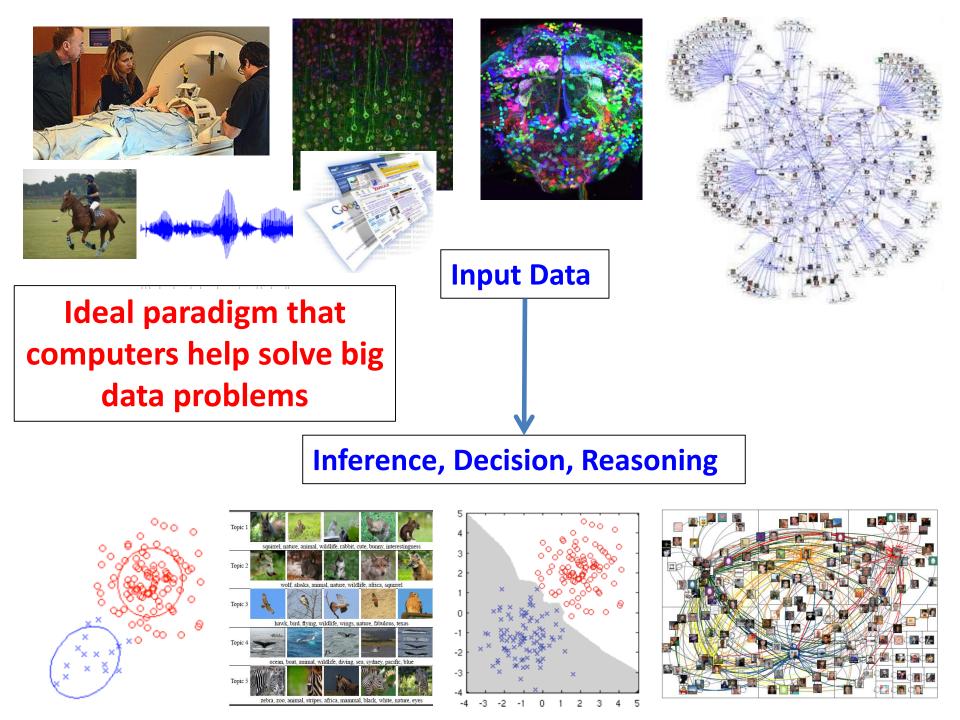

have nice properties.

### Summary: what is machine learning

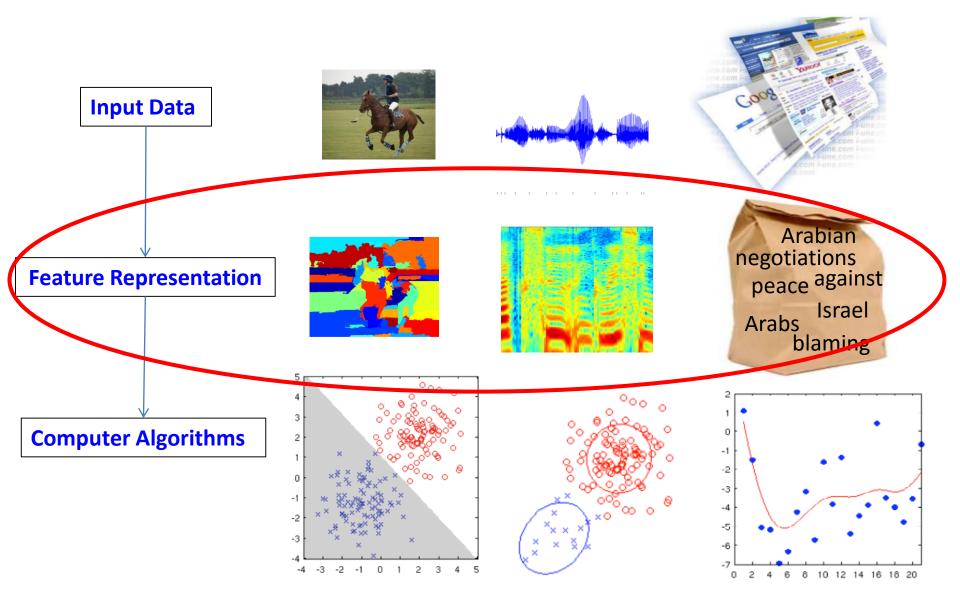

- Machine Learning seeks to develop theories and computer systems for
  - representing;
  - classifying, clustering, recognizing, organizing;
  - reasoning under uncertainty;
  - predicting;
  - and reacting to
  - ..
- complex, real world data, based on the system's own experience with data, and (hopefully) under a unified model or mathematical framework, that
  - can be formally characterized and analyzed;
  - can take into account human prior knowledge;
  - can generalize and adapt across data and domains;
  - can operate automatically and autonomously;
  - and can be interpreted and perceived by human.
- ML covers algorithms, theory and very exciting applications
- It's going to be fun and challenging ☺

Introduction The 10 Technologies

Past Years

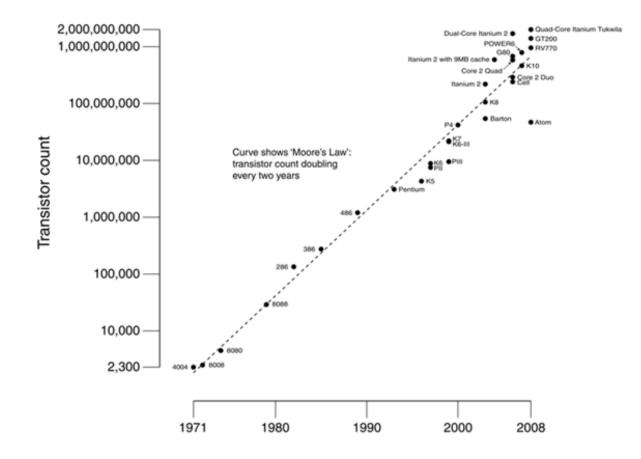

### Deep Learning

With massive amounts of computational power, machines can now recognize objects and translate speech in real time. Artificial intelligence is finally getting smart.

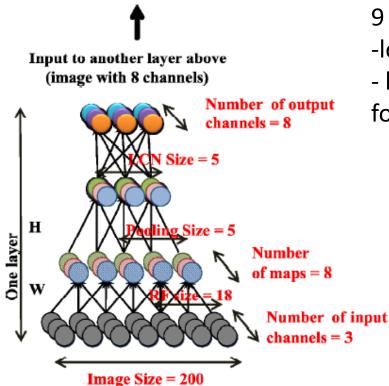

### http://www.technologyreview.com/featuredstory/513696/deep-learning/

 "with more data overfitting is becoming less of a concern"?

### "Big Model + Big Data + Big/Super Cluster"

### **Big Learning**

9 layers sparse autoencoder with:

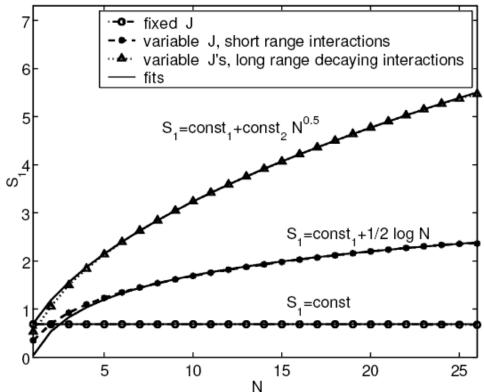

-local receptive fields to scale up;

- local L2 pooling and local contrast normalization for invariant features

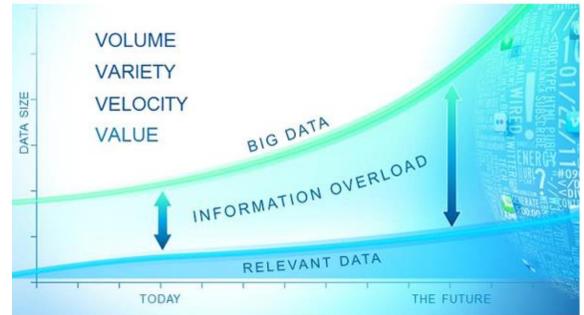

- 1B parameters (connections)
- 10M 200x200 images
- train with 1K machines (16K cores) for 3 days

-able to build high-level concepts, e.g., cat faces and human bodies
-15.8% accuracy in recognizing 22K objects (70% relative improvements)

Predictive information grows slower than the amount of Shannon entropy (Bialek et al., 2001)

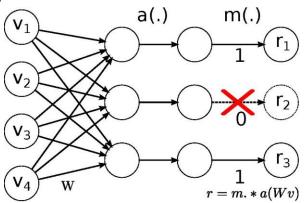

Predictive information grows slower than the amount of Shannon entropy (Bialek et al., 2001)

# Model capacity grows faster than the amount of predictive information!

- Surprisingly, regularization to prevent overfitting is *increasingly important*, rather than increasingly irrelevant!
- Increasing research attention, e.g., dropout training (Hinton, 2012)

- More theoretical understanding and extensions
  - MCF (van der Maaten et al., 2013); Logistic-loss (Wager et al., 2013); Dropout SVM (Chen, Zhu et al., 2014)

### Why Big Data could be a Big Fail?

Michael I. Jordan UC Berkeley Pehong Chen Distinguished Professor NAS, NAE, NAAS Fellow ACM, IEEE, IMS, ASA, AAAI Fellow

- When you have large amounts of data, your appetite for hypotheses tends to get even larger
- If it's growing faster than the statistical strength of the data, then many of your inferences are likely to be false. They are likely to be white noise.
- Too much hype: "The whole big-data thing came and went. It died. It was wrong"

### Therefore ...

- Computationally efficient Bayesian models are becoming increasingly relevant in Big data era
  - **Relevant**: high capacity models need a protection
  - Efficient: need to deal with large data volumes

### Big Learning with Bayesian Methods
